SUMMARY

DevOps engineer with 3.5 years building and owning CI/CD and containerization for air-gapped production systems, onboarding and supporting dev teams as the primary technical contact. AWS Certified Solutions Architect (Associate), experienced building cloud infrastructure (VPC, ECS, ALB, IAM) with Terraform. Specialized in Helm & Kubernetes deployments, GitOps delivery, infrastructure automation, and custom end-to-end services governing national-scale application traffic.

EXPERIENCE

DevOps Engineer | **Israel Defense Forces** (Aug 2022 – Feb 2026)
Mandatory military service; DevOps engineering for operational systems supporting national security. Relocated to the U.S. after completion of service.

- Cut pipeline runtime by 67% and deployment time by 75% for production microservice applications on Kubernetes by building CI/CD around GitOps, replacing service-specific configs with a templated GitLab CI setup with automated test stages and custom Helm charts with per-environment values, moving workloads off Docker Compose setups and legacy OpenShift configs, rewriting Dockerfiles, and automating cross-cluster migrations.
- Eliminated origin overload from a national-scale application by engineering a TypeScript DNS-based routing service with RBAC that prevented users from bypassing CDN sites, plus a self-service web UI for site admins to manage origin-access exceptions. Backed by MongoDB and deployed via Helm and ArgoCD across dozens of edge locations with Splunk and PowerShell monitoring for DNS and application health failover.
- Served as the primary DevOps contact for development teams: onboarded them so they could ship independently, wrote documentation, debugged failed deployments, trained engineers, and presented infrastructure changes to senior leadership.
- Automated hours of weekly manual work using Ansible, Python, Bash, and PowerShell to streamline infrastructure processes such as mass file-retrieval and software installation on dozens of servers across on-prem and private cloud production environments.

PROJECTS

Cloud Infrastructure Portfolio | **Independent** (2026)
malakaii.org | github.com/malakaii-infra/atlas-infra

- Built a multi-AZ production-style AWS environment in Terraform, running a Dockerized application on ECS Fargate behind an Application Load Balancer, with images in ECR and container logs in CloudWatch.
- Designed a custom VPC with public and private subnets, scoped security groups, and least-privilege IAM roles for ECS task execution.
- Deployed through GitHub Actions using OIDC and AWS STS, so the pipeline runs without long-lived AWS credentials.

CERTIFICATIONS

AWS Certified Solutions Architect Associate

SKILLS

- **Cloud (AWS)**: IAM, EC2, VPC, S3, RDS, CloudFront, ACM, ECR, ECS, ELB, STS
- **DevOps**: Docker, Kubernetes/OpenShift, Helm, GitOps (ArgoCD), Git, GitLab CI/GitHub Actions, Ansible, IaC (Terraform)
- **Programming & Scripting**: Python, Bash, Node.js (TypeScript), PowerShell
- **Networking:** DNS, CDN routing, load balancing, VPC design
- **Security**: least-privilege IAM, secrets management, RBAC, OIDC federation
- **Systems**: Linux, Windows Server
- **Data:** MongoDB, PostgreSQL
- **Observability**: Splunk, Grafana, CloudWatch

EDUCATION

DevOps Engineering Program

Israel Defense Forces (Mar 2022 – Aug 2022)
Completed a highly selective 5-month DevOps engineering program, preparing participants to support national security systems. Received intensive hands-on training in Python coding and scripting, Linux administration and Bash, networking, Docker, Kubernetes, and CI/CD.

High School Diploma

Yachad High School, Israel (2021)
