

Malachy (Malakaii) Schwartz

DevOps / Cloud Engineer

New York City

(718) 757-5189 | malachycschwartz@gmail.com | [LinkedIn](#) | malakaii.org

Certifications

AWS Certified Solutions Architect - Associate

Profile

AWS-certified DevOps / cloud engineer with 3+ years of hands-on experience designing and automating mission-critical applications and infrastructure.

Specialized in CI/CD, GitOps, and cluster-scale containerized environments, with direct ownership of deployment modernization, internal tooling, and reliability improvements for operational workloads.

Experience

Cloud Infrastructure Portfolio | Independent | 2026

- Designed and provisioned production AWS infrastructure with Terraform, deploying a Dockerized application on ECS Fargate behind an Application Load Balancer.
- Built custom VPC networking with public and private subnets, controlled security-group access, plus IAM roles and least-privilege permissions governing ECS task execution and GitHub Actions deployments through OIDC.
- Used ECR for container images and CloudWatch Logs to handle container output.

DevOps Engineer | Israel Defense Forces | Aug 2022 - Feb 2026

- Redesigned CI/CD for two mission-critical microservice-based applications by introducing GitOps, automating cluster migration and deployment workflows, and consolidating several service-specific, codependent files into a single, templated configuration with multi-origin environment values, reducing pipeline execution and deployment time by 70% on average.
 - Engineered a Node.js DNS-based routing service with RBAC to prevent users from bypassing CDN sites and overloading the origin. Packaged the service with Helm and deployed it via ArgoCD across dozens of edge locations, enforcing their utilization to significantly reduce latency and realize the performance value of prior infrastructure investments.
 - Used Ansible as well as Python, Bash, and PowerShell to automate crucial infrastructure processes such as mass file-retrieval and software installation on dozens of servers across different on-prem and cloud production environments, eliminating several hours of weekly manual work and improving configuration consistency.
 - Remodeled container orchestration at scale by migrating both aforementioned systems and additional workloads from basic Docker setups and outdated OpenShift configurations to custom, template-based Helm charts, improving deployment efficiency and simplifying maintenance.
-

Education

DevOps Engineering Program | Israel Defense Forces | Mar 2022 - Aug 2022

Completed a highly selective 5-month long DevOps engineering program, preparing participants to support mission-critical national security systems. Received intensive hands-on training in Python coding and scripting, Linux administration and Bash, networking, Docker, Kubernetes, and CI/CD.

High School Diploma | Yachad High School, Israel | 2021
